PRESS RELEASE

The LIFE CERSUDS Regional Working Group holds its seventh and last meeting at Benicàssim

- **The members of the Regional Working Group of the LIFE CERSUDS project have expressed their satisfaction with the good results that the LIFE CERSUDS System has been offering since the beginning of its installation and plan to continue carrying out joint actions beyond the end of the project.**

Benicàssim, 12th 2019.- The 7th and last Meeting of the Regional Working Group of the LIFE CERSUDS project was held today, 12th September. This group brings together different entities and organisations linked to water management, construction, urban planning, research and public administrations.

The Councillor for the Environment of Benicàssim City Council has shown great satisfaction with the good results being offered by the demonstrator, located in Calle Torre San Vicente de Benicàssim, (Castellón) which is showing excellent results before the episodes of rain that are occurring these days and that have occurred since the installation of this permeable ceramic pavement used as an Urban Sustainable Drainage System, managing 100% of rainwater from 18 of the 23 episodes recorded. Therefore, the Regional Working Group has planned to continue taking actions in this area beyond the end of the project.

It should be noted that the LIFE CERSUDS system has a permeability capacity of between 8,000 and 10,000 litres of water/m² per hour and has paved 1,950 m² in the aforementioned street Torre de Sant Vicent. In addition, it will also be replicated in other cities in countries such as Spain, Italy and Portugal.
